COATING CHANGE - VP SERIES BOILER VALVE

With the goal of continuously improve its processes, products, and services to offer its clients tailor-made solutions with the highest quality standards, TECVAL has changed the paint coating of its VP Series Boiler Valves - iron and steel bodies, 1" to 2" sizes, slow and quick opening models. The coating was changed from dark gray inert multipolymeric type paint to black heat-resistant alkyd/silicone.

The new coating was subjected to different tests led by our Engineering and Quality processes to ensure proper performance.

The new coating has appropriate technical characteristics for different product applications and does not affect functionality or quality.

FEATURES	
✓	Service temperature between 150 and 260 °C
✓	Excellent adhesion and flexibility
✓	Direct application on metal
✓	Easy to get
✓	Corrosion resistance
✓	Good mechanical resistance

PRODUCTS WITH NEW SURFACE FINISHING

*NOTE: Valid for products delivered after January 2024.
